GreA & GreB: S2 functional homologs  
GRE A GRE B double mutants (230°C)

— some diff. in initial lesion frequency on the diff. strands

mfd

- J. Mellon ... in rRNA genes there is no repair of ts in mfd mutants
- in vitro ... stalled polyn. inhibits repair
- look at lac & rRNA
- so maybe some other factor helps remove RNA pol. from ts of mRNA genes to allow ts & nts to be identical.

- other genes

greA, greB, rho
