

S. Baldauf - Phylogeny of Euk

H. Phillips

- long branches cause big problems

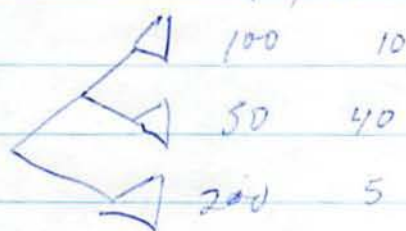

- far away outgroup causes problem

- covarion model ~~should~~ be used

- tested if there is variation in evol. rate throughout time

- measure total # changes for each group

- measure # by position " " "

- using fewer taxa means more prone to LBA

- Combining data sets

- concatenation - says not good

- calculate likelihood for each tree for each gene + sum for all genes
